Roland . . .

While my background is a whole lot less impressive, I do remember the 50's.

But, I never saw any fun in; hitchhiking 30 miles to the Customs House in Boston, filling out an application, walking around looking for a free Notary Public (I had no money when I was 16), and back again to wait my turn to take the test. With another trip to Boston to drop the N from my call! . . . I like the way it's done now.

My mode of choice became CW and as I increased my speed, could not afford a bug, so I made (and still use) a cootie key.

I do not want to see a no-code ham radio! For one reason, I fear that the CW bands will be changed or disappear altogether. I would like to see more CW users, and the only way for that to happen is with a code test. Some of those who learn code will find out how much fun it is.

What I find offensive, is the idea that the young people will bully their way into changing a old tradition to suit their "I deserve everything I want at no cost to me" lives. If CW were really dead, I would re-think my opinion.

5 wpm is very very easy!

Ron Crowley, retired tile artisan
W1WBV (the call issued to me in 1952 was WN1WBV)

Uniden Bearcat BC248CLT Scanner 50 Channel Excellent Condition

There's a world of drama out there. And with the BC248CLT scanner, you can stay on top of the news as it happens. Tune into police, fire, weather, emergency, "ham", FRS, Military, Government, and more. 29 - 54MHz, 137 - 174MHz, 406 - 512MHz. The BC248CLT scanner brings together the finest engineering and styling plus all the quality that has made Uniden a legend among scanner enthusiast. The first scanner with integrated Alarm clock.
Features:
50 Channels You can program all of your favorite frequencies.
10 Bands Covers public service, ham, federal and military land mobile.
Review Feature Full frequency LCD display shows frequencies entered into each channel plus weather frequencies. Also includes an emergency weather alert feature.
Manual Channel Access Go directly to any channel without stepping through other channels
Channel Lockout This feature allows you to skip over channels you currently don't want to hear.
Clock/Alarm Displays time and features any button snooze

$65.00 + $10.00 shipping

Kenwood TS-850SAT, TS-140S, ETC.
Someone else started off their "wants" list this way, sounded good to me! If you have a spare HF rig that you are not using, thats in excellent condition, please send me via email your BEST PRICE SHIPPED - would also be helpful to include picture of what you have and accessories. Would like to stick with Kenwood, ICOM, Or Yaesu rigs. Must have antenna tuner built-in or have a external tuner. Mic is not needed as I have a Heil Goldline with mic cable for all listed rigs. Looking to purchase within the next few weeks so hurry please email and I will get back with you ASAP! RIG MUST BE IN EXCELLENT CONDITION BOTH ELECTRONICALLY AND COSMETICALLY!!

SB QST @ ARL $ARLB003
ARLB003 ARRL to Propose New Entry-Level License, Code-Free HF Access

ZCZC AG03
QST de W1AW
ARRL Bulletin 3 ARLB003
>From ARRL Headquarters
Newington CT January 20, 2004
To all radio amateurs

SB QST ARL ARLB003
ARLB003 ARRL to Propose New Entry-Level License, Code-Free HF Access

The ARRL will ask the FCC to create a new entry-level Amateur Radio license that would include HF phone privileges without requiring a Morse code test. The League also will propose consolidating all current licensees into three classes, retaining the Element 1 Morse requirement--now 5 WPM-only for the highest class. The ARRL Board of Directors overwhelmingly approved the plan January 16 during its Annual Meeting in Windsor, Connecticut. The proposals--developed by the ARRL Executive Committee following a Board instruction last July--are in response to changes made in Article 25 of the international Radio Regulations at World Radiocommunication Conference 2003 (WRC-03). They would continue a process of streamlining the amateur licensing structure that the FCC began more than five years ago but left unfinished in the Amateur Service license restructuring Report and Order (WT 98-143) that went into effect April 15, 2000.

''Change in the Amateur Radio Service in the US, especially license requirements and even more so when Morse is involved, has always been emotional,'' said ARRL First Vice President Joel Harrison, W5ZN, in presenting the Executive Committee's recommendations. ''In fact, without a doubt, Morse is Amateur Radio's 'religious debate.'''

The entry-level license class--being called ''Novice'' for now--would require a 25-question written exam. It would offer limited HF CW/data and phone/image privileges on 80, 40, 15 and 10 meters as well as VHF and UHF privileges on 6 and 2 meters and on 222-225 and 430-450 MHz. Power output would be restricted to 100 W on 80, 40, and 15 meters and to 50 W on 10 meters and up.

''The Board sought to achieve balance in giving new Novice licensees the opportunity to sample a wider range of Amateur Radio activity than is available to current Technicians while retaining a

motivation to upgrade,'' said ARRL CEO David Sumner, K1ZZ. Under the ARRL plan, current Novice licensees--now the smallest and least active group of radio amateurs--would be grandfathered to the new entry-level class without further testing.

The middle group of licensees--Technician, Tech Plus (Technician with Element 1 credit) and General--would be merged into a new General license that also would not require a Morse examination. Current Technician and Tech Plus license holders automatically would gain current General class privileges without additional testing. The current Element 3 General examination would remain in place for new applicants.

The Board indicated that it saw no compelling reason to change the Amateur Extra class license requirements. The ARRL plan calls on the FCC to combine the current Advanced and Amateur Extra class licensees into Amateur Extra, because the technical level of the exams passed by these licensees is very similar. New applicants for Extra would have to pass a 5 WPM Morse code examination, but the written exam would stay the same. Sumner said the Board felt that the highest level of accomplishment should include basic Morse capability. Current Novice, Tech Plus and General licensees would receive lifetime 5 WPM Morse credit.

''This structure provides a true entry-level license with HF privileges to promote growth in the Amateur Service,'' Harrison said.

Among other advantages, Sumner said the plan would allow new Novices to participate in HF SSB emergency nets on 75 and 40 meters as well as on the top 100 kHz of 15 meters. The new license also could get another name, Sumner said. ''We're trying to recapture the magic of the old Novice license, but in a manner that's appropriate for the 21st century.''

The overall proposed ARRL license restructuring plan would more smoothly integrate HF spectrum privileges across the three license classes and would incorporate the ''Novice refarming'' plan the League put forth nearly two years ago in a Petition for Rule Making (RM-10413). The FCC has not yet acted on the ARRL plan, which would alter current HF subbands.

The ARRL license restructuring design calls for no changes in privileges for Extra and General class licensees on 160, 60, 30, 20, 17 or 12 meters. Novice licensees would have no access to those bands.

See ''ARRL to Propose New Entry-Level License, Code-Free HF Access'' on the ARRL Web site, www.arrl.org/news/stories/2004/01/19/1/, for the specific subband allocations ARRL is proposing for each class.

Gee... I thought the last restructuring was to streamline
the license classes, get rid of the under utilized 'entry'
class license(s), simplify things. Wasn't that the reasoning?
Now here we go 'cluttering' it up again.
Lets see, an 'entry' class license is to 'give people a
taste'
of ham radio, see if they like it, sort of an 'easy start'
license,
right? Seems like I've heard of that before (a few times,
actually).
Wasn't that what a couple of the licenses that got dumped in the
last restructuring were? And by all means, lets give that
'entry'
license a glitzy name so no one will recognize it for what it
is,
wouldn't want to make it obvious, would we? Make it easy for
others
to distinguish between them and the other licensee's? I mean,
you
wouldn't want to be able to 'point a finger' at operators who
are
out of bounds, for instance.
To me, an 'entry' class license shouldn't be 'for ever',
there
should be a reason to up-grade, right? How about making it for
a
limited duration, and non-renewable? Hmmm, where have I heard
that
before? (But you know what, it worked! Oh well, that's a good
reason
not to do it that way again, isn't it?)
What's the matter 'Mr. ARRL'? Not getting that 'huge' influx
of
new hams to buy your magazine? Don't you ever learn anything?
How
about doing what you're supposed to be doing? Hey, that would
be a
refreshing change!
'Doc

Pretty much agree with Doc, altho, after the last "restructureing", the value of a
license is worthless! And now, the league wants to degrade it even more ??
Why even have a test?? Just issue licenses on the back of cereal boxes, or inside
Cracker Jack boxes, or like about 45 years ago, when Popular Electronics issued
their SWL calls (Think mine was WPE7AYQ) !! Or, even better: Lets auction off
ALL THE SPECTRUM, for amateur bands to the highest bidders, and balance our federal
deficit! Then we can ALL share the blissful 40 channels in the eleven meter band!!
Maybe, also all those free band channels, up to, and sometimes includeing the CW segment
of 10 meters!! Yeh, that the (pardon the pun) TICKET !! NN7K Jim

The only value in a license are the privileges granted. The privileges granted haven't changed appreciably. I had full access to all ham bands in 1953 and I still have full access to all ham bands in 2004. I lost 11m and 220 MHz but gained the WARC bands. The value of my license is very close to what it was in 1953.

We will determine the true worth, when the next set of rule changes, will
allow ARRL to auction licenses on E-Bay.

To avoid all the pissing and moaning on an individual basis, everyone stand up and say, in unison, "I had to take the code test so should everyone else, boo hoo hoo".

>11m and 220 MHz but gained the WARC bands. The value of my license is
>very close to what it was in 1953.

Unfortunately, there are far too many for whom the value of their
license is measured in how many people it allows them to look down
their noses at. Their only motivation for moving up was so they could
gloat over how much better they are than anyone that isn't up to their
standards. This is also the primary reason that contests and awards
are rubbed in our faces in most of the magazines and newsletters. This
is the crowd the ARRL has been cutivating for years, because they
don't care about advancing the state of the art, or building their own
equipment, helping others, or any of the other aspects of the hobby
that used to make it great. They simply want to buy the newest,
coolest, fanciest or most expensive rig to help them along on their
ego trip, which keeps the advertisers happy.

Somebody let me know when QST no longer has any contests or award
notices in it. Then I *might* be interested in looking at it again.

I disagree with your premise Bob, I hope that you are not so insecure with your manhood that you would find the success of others a threat.

Many of us older farts strive for excellence, we use various means to measure how we compare to others. Do not confuse pride in accomplishment with ego.

In spite of what the feel good types tell you, competition is a basic human instinct. Keeping score is the way to quantify the competition.

To distain the accomplishments of others as "ego" is both supercilious and lacking in the basic understanding of the human condition.

I have very little problem with my manhood. I have a son with a Master of Music (Education) that is a respected teacher. He has a lovely wife and three wonderful children. I have a daughter with an accounting degree that manages a billing department responsible for preparing invoices totalling nearly $30M last year. I have another son at Fort Brag NC in special forces training, and a third son learning the construction business from the ground up. I survived 2 trips to Vietnam on a US Navy destroyer. My wife (also a Navy veteran) and I are approaching our 31st wedding aniversary. Any of these acomplishments are far and away more important than any award or recognition available from amateur radio.

My problem, due to a number of hams of all ages I have met both in this area and elsewhere, are those that use their ticket, awards, contest status or shack as their primary means of identifying who they are and how necessary they are to the hobby. Maybe they never learned what is important, or just don't have a life. Maybe that's what all Ivy Leaguers are like (most of these are from Cornell). But they sure seem to be in the majority in this hobby. And it appears that most of what the ARRL has done in the past several decades was simply to encourage them with more wallpaper to brag about.

Yes, I know there are others out there that are more like you claim to be, and without them, this hobby probably would have died out years ago. But around here they are few and far between. I know of at least two clubs in this area that don't have any. (Actually, one of them did have two, but one got called up and sent to Iraq two years ago. Then the other got frustrated and left the club.) Neither of those clubs does any public service events, offer any classes or do any demonstrations or open houses. Their planning for field day sounds more like preparation for war, and outsiders are not welcome. They are so self centered, that they won't even talk to newcomers until they know how they stack up. That means they still won't talk to some of us that have intermittantly attended their meetings for over three years. I know of three hams that flat refuse to attend their meetings any more. One of them sold all of his VHF and UHF gear so he wouldn't even have to listen to them on the air. He focuses entirely on HF DX.

I hope conditions are better in your area.

You Sir have the opportunity to corrct all that. The beauty of Ham radio is that anyone can start a club.

Maybe it's time you do so and correct all the ills you have observed.

Remember every one has a purpose in life, even if only as a bad example. Now that you know what NOT to do, the rest is easy.

Jim,

I've been curious about this since I first saw your response. Who's
left field have you been playing in?

If you really want the ham license to mean something, forget code,
voice, rtty, packet or any other mode, obsolete or current. Require
everyone to pass an oral exam in front of an FCC field engineer which
includes assembling a QRP transceiver from a pile of parts on the
desk, a soldering iron, wire cutters and a couple of terminal strips..
That's the only way to bring respectability back into the hobby.
Anything less is no more than a super CB license.

<end sarcasm>

The only requirement for a ham license should be the ambition to study
enough to pass the test. The ability to use an obsolete mode should
have nothing to do with it. Of course then you end up with people with
no respect for the rules, no courtesy or no manners, and that might
even disagree with you. But how is that different from what we have
now?

HUH? Most FCC "engineers" can't pass this test! They have EE's which have nothing to do with assembling QRP rigs. They don't teach soldering in school. Get a life.

There aren't many of those guys (FCC "engineers) left in the Commission,
since Uncle Billy and his henchman ALGORE, reinvented the Commission,
and layed off 75% of the Field Operations Folks. Better look for some
other folks to admin your goofy exams and build your QRP Radio's.

I suspect that Bob McConnell is being facetious with his suggestion about building a QRP rig as part of a ham examination.

whell here is my two and a half cents worth.

i am just a newbe (less than one mo).
i do not know code at all, but i am working on it,
i would rather not have to know it as too much to do these
days to keep on and trying to studying so i can work it at a
good rate, it is hade to find time some weeks.
but do not want to see it go away as it looks like a decent way
to yak to someone else.

but do not realy see a need for knowing code just to use parts
of the radio waves.

when i go for my general i plan to know some code, but not sure
if i will have a need for said.

If you can't build one from a few parts and get it on the air, you don't deserve to be called a ham.

Any CBer or welfare ham can turn on the latest, greatest, Kenwood.

If you have even the most rudimentary understanding of electronics, you should be able to build a transmitter.

How about something as simple as a crystal, a digital hex inverter and some wire and a couple of capacitors?

Whoops! that requires knowledge not gained from memorizing a set of questions.

Mores the pity! There have been no real hams since the FCC stopped giving the exams. If that pisses people off, please take note of the mistletoe pinned to my coat tail....

Thats very well put. If I have to take a code test, then why dont the
Business Band, Radio Stations and all other commercial licensees?
Im not going to do code, so therefore I shouldnt be required to take
it to talk via phone.

Business Band operators don't have to take any test. Just pay money
for a license to operate on a fixed frequency with a limited use FCC
certified radio. So different from Ham radio I don't see how anyone can
even compare the two services.

Hey Bob,
I get QST...always have. The contesting stuff doesn't interest me, so I just ignore it. Occasionally I'll see a familiar call and think "hey, I know that guy", then move on.

I was beginning to wonder if anyone caught that. The initial suggestion was that a ham license was worth less after the last restructuring eliminated half of them and reduced the CW requirement. My sarcastic reply was that if they wanted to revert to a time when the license was more difficult to obtain, they weren't going back far enough, but should revert all the way to the era when only an FCC engineer was qualified to test and issue licenses. Then add the assembly to really separate the hams from CBers that can memorize the text book.

Apparently, high schools no longer teach sarcasm as a literary device. Even my pseudo HTML tag didn't clue them in.

I am curious about one thing. In 1977 I took the FCC test series for the commercial phone license. I breezed through third class and passed the second class elements, but missed first class by 6 points. If I had turned around and taken the amateur tests at that time, without the code requirement, what license would I have ended up with?

I received my Novice license in late 1974, and worked my way up the
amateur ranks to Advanced. I then moved over to the commercial exams,
and worked up to First Class. I may be wrong, but I don't think you
could get any class of amateur license, without a code test, back in
those days.

When I took my test in 1957, the FCC guy testing , told me the most difficult test was the amateur advanced.

I took the General Ham and all commercial elements through 1st class and RADAR endorsement. At that time, there was a time requirement between the amateur licenses, ergo I was not eligible to take the advanced or extra.

Back then You both sent and received Morse, and a solid one minute out of three was the passing mark. The test itself consisted of drawing schematics, supplying missing components to a schematic, etc. Unlike today's NO CODE, No ELECTRONICS exams.

The fact that they were tough to pass, marked passage into a select group called HAMS. After waiting about five weeks I finally received that magical piece of paper that allowed me to contact other members of the fraternity.

My first contact was on 3885 Kcs, checking into the Graveyard Net, finally getting to talk to the mystical voices I had listened to on my Hammurland HQ-129X.

Among the biggest thrills of my life.

And in some European countries a decade or three back (I don't know if it's still the same), the tests for a driver's license had questions about mechanical theory (e.g., what is actually happening under the hood when you put your foot on the clutch?) and practical tests (e.g., changing a wheel).

Perhaps today's US driver's licenses are worthless too, and perhaps the people who get them aren't really DRIVERS. Perhaps the only "real DRIVERS" today are the people who pass the tests for membership of the Institute of Advanced Motorists (which existed in Britain when I was growing up, maybe still does) or its equivalent in other countries.

Alan AB2OS

On 02/02/04 07:17 pm W4JLE put fingers to keyboard and launched the following message into cyberspace:

Owen Sound, Ontario Canada

MEETINGS Monthly GBARC meetings are held on the fourth Tuesday of each month, at 7:00 P.M., except in July and August. We meet Rockford Restaurant located 5km south of Owen Sound on Highway 10 (at Grey County road 18). Breakfast get-togethers take place every Saturday, at 8:30 am, at the Rockford Restaurant. This is an informal social gathering of local amateurs and visitors to the area. Anyone can attend and all are welcome. Talk-in on 146.94- Mhz. Join us for "on the air" nets. Check into the GBARC net at 9:30 am (14:30z) Sunday mornings 3.783 Mhz and again on VE3OSR at 9:30 pm (02:30z) (Thursday evenings 146.94- Mhz.)

Community Services GBARC provides communications for community events, such as the Terry Fox Run, the Boy Scouts' Jamboree-On-The-Air, and the Owen Sound Santa Claus Parade. Write or email for more information. Many GBARC members are volunteers in the CANWARN <http://www.on.ec.gc.ca/severe-weather/canwarn-e.html> severe weather spotting network.

Repeater GBARC operates repeater VE3OSR in Owen Sound, on 146.940 MHz (-600 kHz offset). This is an "open" repeater with phone patch, free for anyone to use. VE3OSR is funded by GBARC membership <http://greynet.net/~gbarc/membersh.htm> dues.

You miss the point completely, there was pride in becoming a ham, simply because it was difficult. Once obtained, one behaved as a person worthy of being called a ham.

The worst behavior I remember back then was W2OY who used to call "CQ No kids, no lids, no drugstore cowboys..." Unlike the profanity of the bands today.

With the new age thinking , that finds achievement unfair to those that have not achieved, we have lowered the bar so those who were incapable of competing can be included as well.

First it was "why should I learn the code it is only an obstacle to my desires", the point is all endevors in life have a price of admission, if your not willing to pay, you don't get in the show. At least thats the way it used to be, today if I whine enough about fairness someone will give it to me.

Where does it end? I want to be a brain surgeon, I just don't want to spend time learning all that medical stuff, it's just not FAIR... Would you want me as your doctor?

That is correct. The first codeless license (Technician) was
introduced Feb 1991. But how did the written portions compare between
the amateur and commercial licenses?

This is still going this way. You need to have 15 hours theoretical education and 20 hours driving education under supervision of a driving instructor. Costs you about 1000.- Euros, about 1250 US $. You have to do it with a driving school to securely pass the exam. But the DL then is valid livelong.

The only thing they changed is the oral test. They took away most of it and changed it to a standardized computer test.

> and practical tests (e.g. changing a wheel).

They discontinued this, but they teach you how to change a wheel and how to mount snowchains whilst in the practice-hours with your driving instructor.

> Perhaps today's US driver's licenses are worthless too, and perhaps the

I know the difference, I hold a valid California DL for cars, trucks and motorbikes

>
> Alan AB2OS

This was kind of out of topic. Concerning the amateur license, the test were oral and written, the full nine miles through all the technical and operational questions, for both the CEPT 2 and CEPT 1 licenses. The only difference in testing for HF privileges was the CW test, where you had to send and receive. At my time in the late 80's 13wpm (60 signs per minute), and lateley they dropped to 25 signs per minute, which equals 5 wpm. The test is still held at the Authorities QTH in the state capitals. After the recent workaround of the requirements after the WRC 2003 in Geneva, You are not requested to make the CW test. But you can do it voluntary after seperate application, and as long as the authority will be able to supply CW

capable Examiners

Best regards and 73
de OE8SOQ
Helmut

First of all, welcome to ham radio! Always nice to have
new folks join the ranks.

I understand your point of view about morse code. It can
certainly be viewed as out of date and unnecessary. I'm
an olde fart that remembers travelling to the FCC office
to take my test. Personally, I'd hate to see the code requirement
go away becuase it was a lot of fun. Certainly a challenge, but
once mastered (even at 5 WPM), it opened up an
entirely new (to me) way to communicate. Folks that
don't learn it are missing out.

Steve W6SSP

I remember the First Phone as being the toughest test. There were a lot
of questions about tube type circuits, and I was only familiar with
solid state. The amateur tests had been "modernized" with transistor
circuit questions, but the commercial tests were on "fifties" era circuits.

I have taken them all at one time or another so can't give you an exact comparison, for my money the advanced amateur was the hardest.

As I cut my teeth on "Hollow State", the tube stuff was easy. You haven't lived until you have a rig with 3B24's emitting their purple glow into the shack.

Thanks for the nice welcome. I do appreciate beeing a ham since the early
70s. Starting within the United Nation Forces in Cyprus and operating the
SW-Home Link Station from Larnaca, 5B4ACU was my callsign, it was a real
great thing to be able to operate a full Collins S-line also on ham bands.
Antenna was a Rhombic with 240 feet each side, directed towards Austria.
Back in Austria, I had to pass the exam to get OE8SOQ. Thats for the history
so far.

>
> I understand your point of view about morse code. It can

Steve, nowhere in the ITU recomendation is stated, that there must not be
any more CW operation on the bands.

> Certainly a challenge, but
> once mastered (even at 5 WPM), it opened up an
> entirely new (to me) way to communicate.

You will still be alowed to stay to your favorite mode, and there will be
zillion of hams out there on the all bands, not only HF, who will share
their love for this tremendouos skill.

> Folks that don't learn it are missing out.

Unfortunately, I've lost a part of my hearing abilities, so for me it is
impossible to do Morse code any more, but i loved it, while I could do it.

When I took my no code tech license in 1993 I didn't have to do what you did in 1957.

But I did spend years in college attaining a degree in Electronic Technology , learned all about tubes and electron theory, electronics related math, drew schematics, learned about solid state and early digital IC's, op amps, did work study doing bench work at a BSR factory, learned how to repair motracs and radar units in a professors garage shop (he was a ham and the local service guy for the radios the cops used). Moved into the working world in the late 70's , Trained on teletype repair at the Skokie, Il. plant., Worked as an engineering lab tech programming EPROMs and ROM for early electronic control units writing code onto paper tape, used sniffers on networks, Made engineering changes to prototype circuit boards, Worked on repair of mainframe water cooled computers with scopes, meters, and all kinds of magic tools and test equipment, learned personal computers and telecommunications networks, specialized in bus sized high speed laser printers (3800) and 3745 telecommunications boxes, learned how write mainframe code, learned how to write PC code, can fix computers in my sleep. Have a bunch of WORKING self repaired reel to reel tape decks and radios in my garage collection. Fix my own cars. Maintain my own home.

I'm a no code tech.

It doesn't mean I'm a button pusher. Don't treat us like dirt.

As a younger Ham (27), who could have gone no-code, I say keep the code. It's a right of passage, plus the ability to send/receive means multipliers on contest weekends... hi hi.

I know a no-code who can't ground an antenna.

I know a no-code who has built several homebrew rigs that all work marvellously.

The lack of code in liscensing has NOTHING to do with actual mechanical ability, it has to do with REALLY wanting to be a part of a fraternity that can and does do a lot of good not only for the local communtiy, but the international one as well.

While I will agree that the hobby of amateur radio has a shrinking population (due largely in part to what sent you this message... the internet) and needs some revitalization, lessening the requirements is not the way to do it. Why not promote ARES or RACES. Some of the most fun I've ever had was volunteering in St. Charles county Missouri back in 1993 when 2/3 of the county was under water. I got to see a lot of things and go a lot of places that the average "civilian" wouldn't be allowed to go. THAT'S NEAT!

At the same time, younger members of the community should not be shunned as me and my friends were by certain hams just because of our age. We used to get run off repeaters at 3 am on Friday nights because we were "keeping people up." TURN OFF YOUR RIG WHEN YOU'RE ASLEEP!!! We were told it was because of our age... "no 16 yr. old could possibly have a clue." THAT'S NOT NEAT! To this day, there are local hams who won't talk to me when I call "monitoring" on 2 meters just because of who I am... a grudge based on age held for 11 years... ???

At the same time, I"ve made some of my best friends by trolling VHF/UHF (even though HF is my true love). My first directional 10m antenna was given to me by a guy who was impressed that I had a confirmed QSO from Kwajellain Atoll. No I break pile-ups on a regular basis. Thanks Scott.

Anyway... that's my 2 cents...

What difference does it make if a person who pays taxes to support an organization(FCC), doesnt know a tube from a transistor. Why shouldnt they have equal access to the privilages. Most buy an appliance and start putting it to use. You dont need a license to build. There is so much garbage on the air now it wouldnt matter how clean the signal was. Things mutate with time. I have experienced 49 years of ham radio and 99 percent of what i did didnt require a license. Pressing the mic button did, plus being considerate, respectful, and helpful after pressing the button.

With modern radios you should be able to adjust it so you can still do
Morse. It really ought to be clearer than speech. Or has your hearing bad
enough that now you stick to digital?

Helmut, have you tried a transducer put on the side of the head? The vibrations may do the trick. Or a LED device to do it visually? Or putting your fingers on a transducer or the speaker perhaps?

Just a few thoughts.

Dan/W4NTI

Hi,
Why not? You can use light. Make a flashing light from audio code
signal. Being deaf is not an excuse if you really want to do it.

Thanks for reading my message. I have a good condition, everything works fine, Alinco DR-110T 2 meter Mobile (been using as base). Condition cosmetic I would rate it a 9.5. As I said I have talked on rig, received good reports. Mic however I don't care for, it works fine, however I don't like the way it keys the rig - again, the MIC WORKS, I just don't like it - mic does have keypad.

Isn't that "Special"!!!!!! I can hardly wait to be in the middle of a good QRP QSO and hear some CBer who thinks he is a ham blair in with "Is the channel in use?"

It is nice to know that the good friends at ARRL sold us out! Wonder what 30 pieces of silver will buy these days? Apparently if you are a corporation, it will buy you the priviledge to destroy ham radio! Heck, why require a license at all? That seems like such a bother. Why not just make up a call and get you a radio and jump in "Good Buddy"? I'll bet that for 50 bucks, the "board" at ARRL will back you!

well, it is common courtesy to at least ask "is the frequency in use" and
then wait a few minutes for a reply. I do so on some of the 2 meter
repeaters here in Phoenix. I give me call, ask if the frequency is in use
and wait 2 minutes. no reply, I go ahead and make my call.

also you, of all people, should realize that not everyone is going to have
good equipment or a hot location when it comes to propogation. So, give
the guy a break, even is he is 'Brand new" to the hobby. attitudes such as
your tend to do mare harm than good.

well, you don't like it? petition the FCC with a proposal then wait the
required number of days/weeks to get it to an RFC (notice of proposed
rulemaking). Try to operate outside of that system, and you will be
ignored (one lone voice in the crowd kid of thing). Use the system, and
you will be surprised at what you CAN get done.

Just my thoughts (having been there and done that...).

Aluminum would certainly be hard to wet with tin lead solder. If you
cut the strands, is the inside of each copper colored, or are they
silvery all the way through?

Greetings:

Re the Aluminum coax shield soldering.

If all else fails trim out enough and an inch or so back from the end poke a hole in the braid and fish the inner insulation out and then trim out the inner conductor for it's attachment point to the pcb. and double up the shielding so it can be crimped inside a terminal lug and the terminal lug either screwed to the ground connection or soldered to the ground on the pcb.

One possibility is that your soldering iron is a little too low in wattage to supply enough heat...this would especially be a problem if the coax shield is heavy because heat dissipates more quickly than the iron can supply it preventing it from getting hot enough to flow the solder. The solution is to get a higher wattage rating iron.

I have also found that sometimes the shield on older or lower quality coax oxidizes and prevent good solder flow. You might try putting some solder flux on the shield before soldering it. That usually solves the problem.

If the shield really is aluminum, you would have to go with a crimp style terminal that could be soldered to the board.

G'day G'day

I am the owner of a Yaesu FT-ONE HF Transceiver, and I wish to perform a complete alignment on it. To do this an extender kit is required. I am wondering if anyone has a set of extender boards they would like to sell. The board in question are:

a.. 14P Single Face extender board P/N D3100002
b.. 18P Double Faced extender board P/N D3100010
c.. 22P Double Faced extender board P/N D3100009
d.. 18Px2 Double Face extender board P/N D3100011
e.. Extender cable P/N T9204357
Alternatively does anyone know of a website, or any articles on homebrewing a set.

Many Thanks in advance

Tony VK2TS

Hi all, I have a Kenwood TH-31AT. This is a 220MHz small handi talkie
dating back to around 1985.
The PL in this radio does not have dip switches on the front panel like
the newer version "TH-31BT"
The PL is inside the radio and the PL is selected by soldering /
unsoldering the pads on the chip.
Does anyone out there have the information that tells which pads to
solder / unsolder for the different PL frequencies??
I have about given up looking for it on the internet.
The PL board inside the TH-21AT (2 meters) and the TH -41AT (440) is the
same as the TH-31AT.
If you have this info and it's not to much trouble can you send it to:
lafayetteRadio@optonline.net
THANKS for your help!!!

Best to buy a different phone. But first search the web to find out what
phones have good RFI immunity. Basically, the manufacturer of the phone
didn't bother to design it to prevent such intereference (they are supposed
to but often don't).

Nice HP 141T main frame RF section is 8554L and the IF section is
8552B. Covers DC to 1250mhz. Great for checking bandwidths, harmonics
and spurs, you know. Really nice shape, pictures on request. Trade
for military HF communications gear boatanchor stuff, also older HF
amateur radio gear. Taking resonable offfers.
Need a spec analyzer here is a chance to get a nice one and also open
up some space. get rid of that surplus stuff and put something nice
on your test bench.

82. HP/Agilent 8647A signal generator 250 khz to 1000 mhz fer sale, fer trade, what ever:

Newsgroup: rec.ham-radio
Date: 2004-06-27 19:14:43 UTC

Real nice signal generator from HP 8647A, still supported by HP and has to many features to list but what a machine. I wish they made stuff like this when I was still in engineering. Condition is nice, specs can be found on web. Darn thing goes for big bucks to. I checked out a few sites and it rents for over 300 a month (trivia). Anyway if your looking for a real nice signal generator that has just gone out of production this is it. I am looking for military HF communications equipment in trade, amateur boatanchor HF gear, that sort of stuff. intrested make me an offer. Pictures on request. By the way you can get a fresh calibration on this unit to NBS standards pretty reasonalble ie. cheap.

90. The lady was SCAMMED by XE2FLR

Newsgroup: rec.ham-radio
Date: 2004-07-05 19:37:16 UTC
From: Lieutenant_Dan <Here@Home.com>
Message-ID: <M5iGc.18327$uK.17738@twister.tampabay.rr.com>
Source record: 8

Mr. Juan Lozano (XE2FLR),
You have committed fraud against Mrs. Thompson. She has tried every avenue possible to resolve the illegal reversal of payment that you initiated against her. This reversal has caused undue finical and emotional hardship on this woman. I feel the need to send this OPEN letter to you letting everyone know just what you did.

Mr. Lozano, we know English is a second language for you so I will break this down to ensure there is no misunderstanding while still being totally fair & honest with you and everyone else who may read this.

1. Mrs. Victoria Thompson who:
a. Is a registered eBay member, in good standings (eBay.com).
b. Is a Verified Paypal Member (Paypal.com).
c. Listed a Motorola Communications Service Monitor.
d. eBay Item number: 3817317151
e. View item at:
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3817317151
f. Shipped item via United States Postal Service (USPS.com) with Insurance
g. Delivery confirmation number 0303 2460 0001 6669 1339

2. Mr. Juan Francisco Lozano-Rodriguez
a. Is a registered eBay member (XE2FLR)
b. Is a Verified Paypal Member. (xe2flr_@hotmail.com)
c. Bid and won auction for item number: 3817317151
d. Paid Victoria Thompson via Paypal
c. Paypal transaction ID # 8YY56447B7708882X
e. Upon receipt of the shipment confirmation number you reversed payment

Mrs. Thompson listed the Motorola Communications Service Monitor on eBay.com

You won the auction with a winning bid of $1,029.09USD with an initial shipping price of $30.00USD for a total price you paid of $1,059.09USD.

You made payment using your credit card thru Paypal.com. After a few days you asked Mrs. Thompson when she would ship the item. She responded that it would take a few days for her son to ship it because the unit is very heavy and she could not lift it. Mrs. Thompson's son sent the item using USPS.com and paid $40.00USD for shipping.

NOTE: The Shipping cost an additional $10.00USD, Mrs. Thompson was kind enough not to bill you the additional money for it.

After the item shipped you were emailed the delivery confirmation number. Mrs. Thompson who is new to eBay and Paypal purchased items on eBay and also paid for services using her paypal money. Upon receipt of the delivery confirmation number you reversed your payment to the unsuspecting Mrs.

Thompson. (Your motives are unknown)

Mr. Thompson has notified You, eBay.com, Paypal.com and SquereTrede.com
You have responded telling Mrs. Thompson that the reversal was inadvertent
and that you would correct it immediately and she should not worry.
You also contacted SquareTrade.com and told them to close the investigation.
The reason you told them: "I have resolved this with the other party." These
are your exact words to them. The only problem with this is, Mrs. Thompson
still has not been paid nor did you resolve issues with her Paypal account.

This matter must be resolved immediately!
You must pay her with a cashiers check for the full amount of $1,059.09.00

Complaints have now been filed with the following agencies;

The Internet Fraud Complaint Center and the Federal Bureau of Investigation

Mumbai Amateur Radio Society

Hi friends

As you are all aware that our Amateur Radio Emergence Service Team headed by NLF including Sandip Adiwarekar-VU2UGO, Arun Singh-VU3AUA, Micky Korde-VU2IZO and Anish Korde-VU2OZO were mobilised on a call from Delhi to Bihar which is ravaged by Floods all over the state.

NLF & team left early morning by air on 15-07-2004 via New Delhi for Patna, Immediately Reaching they met State Secretary R & R and were informed about the situation , a control station was setup in sachivalaya headed by VU2IZO & VU2OZO with whom the QSO was made by us on 40 mtrs yesterday

As per the information received NLF, UGO & AUA will be leaving Patna and helidropped in 2 remote district which are submerged in waters and no communication possible.

16/06/2004

10.45 am : As per last update received from Patna , NLF UGO & AUA left Patna and are on the way to flood ravaged district , ZRS & Ankur who are on Monitoring Mode are waiting for a QSO with the MARS ARES Team from Disaster Area

Further Update will be made as per the information received from the Disaster Site.

VU2LOC
Shailesh Deshmukh.

P.S. Ham Members are requested not make ant QSO ctc with the MARS ARES Team unless they request for , they are in regular touch with Mumbai(ZRS) , Also they are on Batteries so they will be coming Intermittently on the air to pass emergency messages.

103. Is there a general consensus at all for best ham radio prices?

I buy most of my gear at HRO, but I'm getting to where I'm not exactly smiling at some of the prices. I know ham radio gear is expensive, but I get almost sick to my stomach the thought of paying $90.00 for a rapid charger for my IC-190A.

Is there a better deal on the web anywhere?

MUMBAI AMATEUR RADIO SOCIETY

Dear Ham Friends

As you are all aware Grave floods situation in Assam & Bihar ,Mumbai Amateur Radio Society received an SOS call on 15/07/04 at 12.30 midnight from Mr Saroj Jha (Deputy Secretary ,National Centre of Disaster Management(NCDM) Ministry of Home Affairs Govt. of India, ex-A R R UNDP INDIA) to provide communications support in the floods affected area , Mumbai Amateur Radio Society (MARS) immediately responded and 5 members of MARS ARES Team were immediately mobilised.

MARS ARES team headed by NILESH RATHOD - VU2NLF, SANDIP ADIWAREKAR - VU2UGO, ARUN SINGH - VU3AUA, MILIND KORDE - VU2IZO and ANISH KORDE - VU2OZO took the first available flight to Patna via New Delhi, from where they were airlifted by helicopter to various far flung submerged district.

MARS ARES team hams communicated vital information to base station set up at Patna Secretariat (Sachivalaya) on both RT/digital mode which were also being monitored at our MARS MUMBAI CONTROL, we request hams who are QRV on HF may please monitor and if any help required ,necessary action might be taken.

MARS ARES team members are Amateur (Ham) Radio Volunteers who have their own job and not working full time as wireless operators in any Ham Radio Institute ,also the team members were aptly trained here locally thru various simulated disaster management exercises which were regularly held in our society.

Further Update will be made as per the information received from the Disaster Site.

VU2LOC
Shailesh Deshmukh.

110. rf meter

Newsgroup: rec.ham-radio
Date: 2004-07-18 15:19:27 UTC
From: HarleyDog <harleydog@aol.com>
Message-ID: <Xns952A7338CE76B11012350@63.223.5.254>
Source record: 28

Been trying to find the cause of excessive rf but lost on a good meter to use. A friend has so much rf on his ht on one freq that he is unable to transmit or rec on that freq..Ht picks it up in all rooms and outside, brought my ht over and the same result.

Would like a good meter anyway and this makes for a great opportunity to do so.. So any ideas on a good meter to find the source of these problems?

Jim

111. Re: rf meter

Newsgroup: rec.ham-radio
Date: 2004-07-19 01:48:58 UTC
From: JohnJacobJingleHimerSchmidt <jjjhs@campnutty.net>
Message-ID: <eMFKc.127610$XM6.118792@attbi_s53>
Source record: 29

If the "rf" is in the lower part of the two meter repeater frequencies
around 145.250 it might be a leaky Cable TV, cable tv is a secondary
user on two meters but on a non-interference basis, I believe channel
13 - cable, is around 145.25 and if you can tune above the two meter
band 4.5 Mhz above 145.250 listen for audio and see if it "matches" what
is on channel 13 on cable tv. If it is leaky TV cable then the cable
company is responsible for repairs up to the entry point, if the leak is
inside the building, then owner is responsible for repairs.

Good RFI info at www.arrl.org I think they list all the cable
interference on the site, just search for cable rfi.

If your a ARRL member and the cable company refuses repair, have the
ARRL assist and they will have the FCC get involved if necessary!
Same for power line noise, but not BPL yet!

Or have the neighbor turn off all the electricity in the house
and see if the "rf" goes away, then if the interference is still there
it maybe the TV cable, if not then turning on and off different
appliances to see if one of those generates "RF", you be surprised
at some of the things that can generate "RF" even down to heating pad
controls, any kind of electrical device, stuff you would not think of
generating "RF". Home alarm systems also and they maybe on battery
back up power. Call the alarm company before messing around with the
home alarm system or the police may show up if you disconnect the alarm
system, it sends in an "alarm" if disconnected.

112. Stable FM with no AFC?

Newsgroup: rec.ham-radio
Date: 2004-07-22 22:49:38 UTC
From: emctwo@access-4-free.com
Message-ID: <7d82b1b2.0407221449.5720df10@posting.google.com>
Source record: 30

Is it possible to do anything to a FM broadcast receiver that seems to have no AFC to help it to stay locked on a station? I have a single purpose FM radio for music-on-hold that will drift off station in the course of a few hours.

can I:

Choose another station?

Move the dipole antenna? (If so, then in which direction shall I point it, at the station or perpendicular to the station?)

add a part? (doubt it is worth it)

Pitch it in the recycling bin and get another radio?

127. Short Wave radio building

Newsgroup: rec.ham-radio
Date: 2004-07-27 23:14:44 UTC
From: songoku_@ig.com.br
Message-ID: <9ec5b8a8.0407271514.45308615@posting.google.com>
Source record: 45

Hello,
I'm building a SW and MW regenerative receiver from a schematic that I made changes.(I added more 3 antenna coils among other things).
The regenerative "level" consists of one transistor, BF494, but I was thinking about using the 2N2218 for more power (what do you think)(and if I use a Darlington pair of BF494 or 2N2218?).

The original project ranged from 5MHz to 15MHz, the antenna coil was formed by 3 individual coils, all of them were wound over a 10mm dia. ferrite core:
- L1 (The one that links the aerial to earth) -> 4 turns of #20 AWG wire.
- L2 (The one that makes the "feedback" and outputs the audio signal) -> 2 turns of the same wire.
- L3 (The oscilator coil) -> 8 turns of the same wire, with tap at the 3rd turn.

But there is a problem: I don't want to wind them on a ferrite core, I want them on a air core, so, look at the modifications:
I'm using a 21mm dia. PVC tube former, and #24 AWG wire.
I'll use a 40 - 400 Variable cap.
For AM(I'm using a 50mm diameter former):
- L1 -> 39 turns
- L2 -> 19.5 turns
- L3 -> 78 turns (225 uH) (Tap at the 26th turn)

For SW1(21mm dia., 1.67MHz - 5.4MHz)
- L1 -> 20 turns
- L2 -> 10 turns
- L3 -> 40 turns (21.7 uH) (Tap at the 13th turn)

For SW2(21mm dia., 4.67MHz - 14.78MHz)
- L1 -> 5 turns
- L2 -> 2.5 turns
- L3 -> 10 turns (2.9 uH) (Tap at the 3rd turn)

For SW3(21mm dia., 10.27MHz - 32.49MHz)
- L1 -> 2 turns
- L2 -> 1 turn
- L3 -> 4 turns (0.6 uH) (Tap at the 1st turn)

Will those work?
I'm thinking of using a 8mm dia. former (BIC pen) for SW3 and SW2 coil.

Another problem is the rotary switch, It's is needed a 5x24 one, and
it's almost impossible to find one of that...

Can anybody help me, please!!!

Sorry to bother and thanks,
Hayato

I've recently just become interested in ham radio. I'm 22 year old college student with somewhat limited funds. I've heard of people building radios. Is that something you can do with just instructional books or is that something only advanced people do? And what kind of radio would be good for somebody like me, just getting into it? Thanks for any and all help.

Hello Jason, if you are not licensed as of yet then that would be the first place to start, get your tech license and that will allow you to talk on 6 meters and up which would include 2 meters and 70 centimeters where there is alot of activity due to the use of repeaters stuff like that. however activity will depend on your location.
There are alot of do it yourself radio kits available but for what they cost you'd prolly be better off trying to buy a used hand held or mobile radio, but building is a great way to learn about electronics but i don't know if it's the best way to start..
check out www.arrl.org for all the info you could want on getting your amateur license and do a search for local clubs in your area, they will most likely be able to direct you in the right direction.

whatever you do I encourage you to get your license if you don't already and upgrade as far as possible. upgrading and getting on the HF bands where world wide contacts are possible with a piece of wire and 5 watts is a very cool feeling, plus to be HF is 90% of amateur radio..

I will do that. Thank you for the help. Is there any study guides or books you'd reccomend as far as the tests go?

Oh, and I forgot one of the most important questions: what kind of radio should I buy? I have no idea what to look or ask for, or even where they sell them.

www.arrl.org has info on buying study guides, i'm not sure but radio shack used to sell a study book also. your going to be looking for something that will get you your tech license..

> Oh, and I forgot one of the most important questions: what kind of

you can check out www.ebay.com for new or used gear.. depending on how much money you want to spend you should look for a nice dual band or single band hand held or mobile radio.. look under the ham radio catigory.

do you use AIM, Yahoo, MSN or ICQ? if so, lemme know how I can contact you, maybe we can talk one on one..

Study guides are available through the ARRL at www.arrl.org. For the Technician license, "Now You're Talking" is the book that you will need. They also have study guides and material for the General and Extra class licenses.

As far as radios go, the ARRL study guide has some info on that even though that is not on the test.

As a Technician, you will have full privileges on the VHF and UHF bands. I would recommend starting with a mobile VHF/UHF radio. These are FM only and primarily good only for local communications (and packet radio, a digital mode) unless there is a major band opening/ Good brands are Kenwood, Yaesu, Icom, and Alinco.

To fully explore the Technician privileges, you may eventually want an HF/VHF/UHF all mode radio so that you can work sideband on the VHF and UHF bands. This can give you a lot more range. Plus when you upgrade to General, you will already be equipped to use the HF bands. Good brands are Kenwood, Yaesu, Icom, and Orion.

I recommend that you join a local club to get advice on licensing and on radios. Different radios have different combinations of features and it is difficult to say what might suit you.

To find a club in your area, check the ARRL website. If that doesn't show anything, do an internet search for amateur radio for your location. That's how I found a new club when I moved.

Yep you is right

DX shud be at rec.radio.amateur.dx

There are guidelines as to what Ham topics go where -- at URL:
http://faqs.jmas.co.jp/FAQs/radio/personal-intro

But being NG's are mostly unmoderated -- folks put their for sale items on
all of them.
As well as the OT political rants. Oh well.

Playing NG cop will do little good -- at least it hasn't for the past 4
years (;-(

I concur on trying to find a club...it would be much easier. I was a Ham in the 1980's...Let it slip, and am just coming back. I studied using some online resources, and you can download the "Pool" questions from the ARRL.ORG site. These are the entire question list from which they make the tests..It is a good excercise, once you study, to see what you know....Don't memorize them, but try to learn by them.

As far as building equpment, the best way is to look for QRP equipment. QRP is low power .1 - 5 watts or less. It is usually restricted for the HF bands (80Meters, 40Meters, 20Meters - all below 30 Megahertz). The VHF-UHF stuff gets tricky to build because it is higher frequency.

I have purchase lots of stuff of ebay. Most of it is good quality. My experience is Amateur Radio Operators are a good bunch, and rarely will you get stuck with junk. If you go for the TECH Exam (No Morse Code), look at a 2 Meter or 440 Rig. I have seen them for around 50-100 bucks. Also check out eham.net. They have a classified section. Because VHF/UHF stuff is line of site, you usually use this equipment with a repeater. A repeater is a receiver/transmitter on a tower or hill, that receives your signal, and retransmits it on a different frequency. Your transmitter has an "OFFSET" switch (600 Kilohertz for 2 Meter) that automatically send your signal on the right frquency. You then listen on a different frequency. I have purchase 2 Meter HT (handi-talkie) for about $50.00.

To talk globally, you will want to get on the HF bands. That takes learning Morse Code at 5 Words Per minute. It is pretty easy, and there are tons of learning tools on the Web. I downloaded several, that let you cut and paste text into, and plays morse through your speakers. The ARRL also has Code Lessons, that let you learn. Once you get your 5 WPM Code, you can talk on the High Frequency ham bands...Then you can build and use that neat QRP equipment I talked about.

Also, every June, they have "Field Day". This is an emergency excercise, where clubs and indivuduals set up portable equpment and make contacts. It is to prepare for emergencies, but is also a social event.

This is really a good hobby. I don't know if you heard, but my local CBS affiliate in Los Angeles talked about HAM RADIO helping out with Hurricane Charlie relief efforts. The Cell Phones, and Phone Lines are down, but Hams with Portable equpment are providing emergency comm's in the area. Let me know if you need any additional information, I would be glad to provide it.

I didn't think you could reverse a payment from a confirmed PAYPAL member. I am a confirmed member, and the payments go straight from my bank account. I use a Credit Card for a backup. Why does PAYPAL allow this? If that is the case, I will not use it, or get my money before shipments. The whole idea of PayPal was a secure means of exchanging money.

Guess I learned something.

Now it is SELLER BEWARE. His promise of paying doesn't mean squat, until he dishes out the money.

161. Trouble with a Yaesu MH-29 Speaker Mic

Newsgroup: rec.ham-radio
Date: 2004-08-25 10:27:53 UTC
From: len@shellworld.net
Message-ID: <ab5d0e9c.0408250227.1b48b230@posting.google.com>
Source record: 229

I have a Yaesu FT-530 with the MH-29 hand mic. I have had the
rig for several years and it has been very reliable.
Recently however I have begun having troubles with the MH-29.
First, one morning I turned on the FT-530 and discovered that
the button on the MH-29 that up to now had flipped between 2 meters and
440 now was changing the frequency of the tranceiver. I do not
have the manual for the MH-29, and so I do not really know if something has
become mis-mapped, or if this is difficult to resolve.
About a week ago the PTT switch on the MH-29 began to work intermitently.
There seems to be no clear pattern, and it does not appear to be
caused by the cable. Any insights or pointers into the resolution
of these difficulties would be sincerely appreciated, or
perhaps it is time to track down a replacement? Thanks in advance!

I have, for sale, a Yaesu FT 890 AT all mode ham radio tranceiver. All features are 100% functional and in great condition. Included with radio are: Original hand mic, 12 VDC power cord, mobile mounting bracket, operation manual, and complete service manual. Radio also has CW filters and has been modified to allow MARS operation. Great first radio and fantastic for use in the RV. First $450 takes it. Call Rick @ (602) 438-8325

167. New ham wants advice on a good 2m/440 HT for a first radio

Newsgroup: rec.ham-radio
Date: 2004-09-01 02:56:51 UTC
From: Andy Entrekin <entrekin@iname.com>
Message-ID: <TTaZc.94588$Fg5.26081@attbi_s53>
Source record: 235
Cross-posted to: rec.ham-radio,alt.radio.amateur,alt.ham-radio.vhf-uhf,rec.radio.amateur.equipment,rec.radio.amateur.swap

I passed my Element 2 exam last week and am eagerly awaiting the posting of my Tech ticket on the FCC site. In the meantime, I have been doing research on radios. I have considered as many factors as I know of, including TX power, physical size, and portability. My needs have led me to look for a good handheld unit. Before anyone chimes in with a recommendation to go for a mobile, let me say that being able to carry the radio with me wherever I go is a must, which rules out mobiles.

I am looking for opinions about HTs that cover the 2meter and 70cm bands and have at least 5 watts output. I value the opinions and experiences of other hams, so I figured that these newsgroups would be a good place to solicit them.

Please either post your opinions here, or feel free to email me at "entrekin-at-iname-dot-com" with the appropriate symbols (low-tech anti-spam measure). I look forward to getting lots of input!

Thanks,
Andy Entrekin

< snip >
I haven't bought a new dual-bander recently, but I love my Yaesu FT-530. It
has been
bullet-proof. I have dropped it, overheated it (both internally and with
sunshine on a
car seat) and it keeps coming back for more.

Based on my experience, you should have
-- a radio with external 12V power input
-- a radio has a detachable antenna (BNC mount probably best)
-- an external speaker/mike for your radio (I think they all accept
one.)
-- a repeater directory for your area (or find one on the Internet)
-- at least one outside antenna cabled into a favored operating location
(2M j-pole also works on 440)
-- a holder for your HT that props it up on a desktop or bench
-- an accessory battery for long-term worry-free portable operation
(Gel-cells are good.)

5 watts on VHF/UHF will generally take you out to the radio horizon, or to a
high-level repeater even with a
rubber duck antenna. The outside antenna will help you QSO with low power
stations or somebody with a bad antenna.

Welcome to the amateur ranks.

I like my Kenwood TH-D7a, which gives me essentially two radios in one (as opposed to a single radio that can be on one of two bands) plus APRS and packet capability.

Congratulations on your ticket!!!!!!!!!!
I agree, the FT-530 is a GREAT radio!! Also, check out the Alinco DJ-580T. Almost the same and built like a tank also! These are older radios and a bit larger.
This is not a bad thing! They usually have louder speaker audio than the tiny HT's of today, although the Alinco DJ-580T has the edge on speaker audio. . One more favorite on mine is the Yaesu FT-50R. It is smaller than the other 2 and works great with LOUD speaker audio. This is a dual band radio but one band at a time. The best part of all, these radios can be gotten at a good price that won't kill you!!

There are any number of good radios out there, a lot depends on personal
preferences.

But, the one thing I urge you is to invest a few more bucks on a
telescoping antenna. For less than 20 bucks, you'll double or more your
effective power, plus improve your reception, as compared to the rubber
duck that comes with most HT's.

Of course, the telescoping antenna will be a bit more bulky than the
duck, so that may or may not be a factor for you, depending on how you
intend yo use the radio.

Indeed.. The duck that comes with the Kenwood TH-D7a is by far the WORST
antenna I've ever seen.. A comet SMA whip tripled my range.

The other thing that's a big range booster, is a "tiger tail", which is
nothing more than a 19" wire and a lug to fit under the antenna connector..
This provides a counterpoise for the antenna, and acts as a crude dipole.

With a good antenna, you will find that the 5W setting is rarely needed, and
mostly just chews up batteries.

I have the TH-F6 and it is a Tribander for around $300.00 you can't beat it.
I get around 16hrs per battery charge

my 2 cents

Don't blow all your cash on an HT. By all means get one, but save some dough for a nice starter rig like a Yaesu FT-857 or an 897. You'll get all-mode on a lot of bands for not a ton of cash.

Kudos on your ticket!

Well you did get many very good comments. I won't repeat any.

I have the TH-F6. I can't compare features, but what I think can be
important to you:
* You can get an AA battery pack for when your Li=Ions are dead in an
emergency, or you are too poor to afford new ones (Tx power lower however)

* I believe it has the widest general coverage available for a "dual
bander".= 100 KHz to 1,300 MHz. AM , FM, Wide FM, U/L SSB, CW. You name it
(except the CW beacons on 902 and 1296) and you can probably listen...TV,
CB, AM & FM broadcast, FRS, GMRS, Aircraft...wad-I-miss?

Fine tuning on HF down to (sort-of) 33 Hz.

* It does 222 - kinda rare. Lets keep the band alive!

* It is pricy, but it is around a very loose rule of thumb for cost of
'about' $100 per band.

* Better antennas are available. I have a 19 inch for mine, when needed.

5W, .5W, .05W on internal

5W, 2W, .5W on external 12 V sig lighter plug avail.

I forget the double A power, possibly 2W, .5W, .05W

The beeps are pretty "blind-friendly"

Disadvantages (to some - I'm ok with it)
* SMA Antenna connector.
* It doesn't receive FM below 29.7.
* Doesn't receive CW & SSB above 470MHz (See beacon comment above, but AM or
FM "works").

True for most HTs, and a very good idea.
I have AA packs for all my emergency gear, and I keep a stock of batteries
in the car which I rotate out into the kid's toys periodically.

Andy,

Congrats! I have two I recommend, will give the drawbacks to both.
ICOM W32A, very good radio, short battery life transmitting on high power 2 hrs max 50 % cycle, 5-7 hrs listen on NiMh, direct battery charge from wall wart and will run off of wall wart has built in charge controller, excellent output, dual receive, weak audio, dual scan (memory and frequency), dual independent vfo's, direct frequency input, v-u, v-v, u-v, u-u, splits, cross-band repeat, weather, 100-999 M. receive except 220; easy to program can be programmed off a computer with cable and sw, 200 memories total split between U and V, onboard instructions, alpha numeric display, new around $250, haven't seen one used.
Kenwood TH-77A, a little harder to program than the ICOM (manual only to one memory bank), older model, dual band, dual receive, outstanding audio, dual scan (memory and frequency) v-u, u-v, u-u, v-v, I don't know if it will crossband, receive 130-500 (I think it can be extended but VFO's are tight, not as flexible as the ICOM), excellent battery life 12-14 hrs on MH PB-8 metal hydride batteries, only 40 memories, direct frequency input 2m drops first digit, will run off of wall wart (dc jack) but not charge battery (external only), outstanding front end and transmitter very solid, I have 2 of them both used for $100 each, no weather or air receive, not computer programmed, my knock arounds very rugged, one is my base, the other I carry every day around the yard, truck, etc.

Congrats on the new ticket! I just got mine Tuesday, so I was in the same spot last week. I settled on the Yaesu VX-5R, and got a Diamond SRH77CA antenna to go with it. I picked it because it hit the sweet spot on price/performance for me, and it seemed to get the best reviews on eHam.net. I love my Icom R71A, and was really looking for another Icom, but they all seemed to get picked on for pricey accessories and susceptability to intermod.

Seriously though, it looks like almost all the HTs in the $200-$300 range are pretty good, I've since had recommendations for the Icom W32A and the T90A. I think anything that can put out five watts on 2M will make you happy, all the rest is just flavor.

I went with the VX-7R which is a little more money, but worth it to
me. It has a good LI-ion battery that does well and runs a reasonable
power.

>Seriously though, it looks like almost all the HTs in the $200-$300 range
>are pretty good, I've since had recommendations for the Icom W32A and the

I think the W32A is one of the best duobanders put out. Good enough
that after it was discontinued there was still enough consumer demand
they brought it back and it's been back over a year. The W32 is
really from an earlier generation that is quite a bit larger than the
VX-5 or 7. For those of us who wear bifocals that is not all bad.

I happen to like the little Yaesu radios, although the VX5 and 7 are
not really Yaesu. They are listed with them and maybe built by them,
but the name plate lists a different name. Mine's in the car and I
don't remember the new name.

I have a complete set of the Diamond mobile antennas with both mag and
lip mounts. Well I did until my wife drove into the garage without
lowering one.

I use the large one on top of a 4-runner and have had it ever since
they hit the market. It has hit a few bridges and parking ramps
knocking the whole thing off the roof, but it still works fine on both
144 and 440. (That is one tough mag mount). I did break one though.

I have had good experience with Icom over the years owning W2A, 3SAT, 901A, R10, and a 725. All of these radios have been great products. I wish they still made or would replace the concept of the 901A.

Recently I picked up the Kenwood TH-F6A. It is a great radio that consolidated three different radio I had previously. It is a 5 watt triband 144, 220, 440 with wide band receive. I have been impressed with the receive since I was not expected much but the audio is clear and loud and sensitive. The transmit is great too. I would recommend getting an after market antennae. I picked up the Diamond SRH320A improves the transmit. In my area there are many 220 machines making this a great one radio solution. It is impressive how well the radio performs given how small it is. Hopefully Kenwood's success will wake Icom and Yaesu up to the 220 market place in the USA.

Good luck on your decision. As you noted any of the major player make a good product and you will mostly be happy with any decision. I feel currently the Kenwood is offering the most band for the dollar.

Through the magic of my PC soundcard and some downloaded freeware, I set up my very own INTERNET RADIO TALK SHOW, where I discuss the day's top news stories from a completely independent and refreshing viewpoint.

My shows run about 20 minutes each (to conserve bandwidth). Please visit my website. The URL is below. As a pioneer in one of world's last wilderness areas (namely, the Internet)I need all the support and listenership I can get.

The Max Murray Radio Talk Show is produced on a barest of shoestrings. I'm using the free webhosting of geocities, a bunch of freeware, and my PC microphone-soundcard. That's it! Broadcasts originate directly from the familiar comforts of my den studio at home. I hope you find the shows fresh, fun, and entertaining.

You'll need a Windows Media Player to listen. If you have very common Windows Media Player installed on your PC, and chances are that you do if you have ever listened to anything on the Internet, then all you have to do is click on my link "on the air" and you will be listening to the wit and wisdom of The Max Murray Radio Talk Show! Its about news talk.

My show is broadcast at www.geocities.com/maxtalkradio

Please visit the show and shoot off an email telling me what you think. I welcome your feedback.

Thanks, Max Murray
Talk Show Pioneer on the Frontier of Tomorrow.

Hi Steve,

The FT-900/AT is very under-rated. It's small, rugged, and you can
usually get them for around $500 used. Probably the best receiver of
any transceiver I've ever owned (non-DSP). Does everything you will
ever want. Antenna tuner matches up to 3:1 or so.

http://www.qsl.net/sm7vhs/radio/yaesu/ft900/specs.htm
http://images.google.com/images?q=ft900%20yaesu&hl=en&lr=&ie=UTF-8&sa=N&tab=wi

If you want to operate CW, you should look for one with the CW filter.

Dave

194. Need help designing 2mhz PCB antenna for tiny transmitter

Newsgroup: rec.ham-radio
Date: 2004-09-12 17:18:58 UTC
From: shannon@simunity.com
Message-ID: <bf158466.0409120918.5b4b4ded@posting.google.com>
Source record: 62

Hi,

I am designing a tiny Microchip PIC processor driven 2mhz transmitter and I need help designing a 2 layer 3/4" square PCB coil and matching network. I am hoping to redesign the existing antenna design which uses a tiny ferrite coil and matching network. I am looking to build the antenna right onto the PCB to save space. The range of this antenna only needs to be six feet to a special superhetrodyne AM radio receiver. This transmitter is part of a mouth controller for Quadriplegic people to control their wheel chairs, TV's etc. with their tongues. see: www.newabilities.com for more info.

I need an antenna engineer to help define the PCB coil length, wire width, spacing and vias and create the matching network needed to load the coil from a 3.3 volt square wave logic level drive from the PIC. The matching network must filter off spurious harmonics producing a clean 2mhz carrier.

I have a modest budget for this portion of the design. Please contact me if you are interested in designing and verifying this type of antenna.

Thanks,

Shannon Bailey

Why 2Mhz? the antenna won't be efficient at all, and there is a TON of noise
in that band. Why not use some of the prepackaged 433Mhz data TX/RX modules
out there...or 2.4Ghz for remote control?

The short distance (18" from mouth to receiver) of the system masks most powerful in band interference. We do experience interference from security scanners at stores and other sources of 2mhz interference, but the button coding scheme avoids most errors. The guts of the whole transmitter are the size of an electronic watch module and fit inside the persons mouth and use membrane keys for buttons.

Several hundred existing FDA approved systems have been in use for up to ten years using this frequency. It passes through human tissue easily. I am engineering a replacement transmitter design for these existing systems as the current discrete logic transmitter design is outdated and needing replacement. I do not have the freedom to switch frequency at this point. I am looking for an air core (or PCB material core) coil design and matching network so I can eliminate the current ferrite antenna from the new design to make it even smaller.

Our current antenna produces mostly inductive radiation which works well enough in the existing transmitters to reach the receiver. I can use the existing antenna if no PCB alternative proves sufficient. The current antenna is a 1cm by 2x2mm square wire wrapped ferrite inductor with about 18" of 32ga wire, a couple of surface caps and a surface inductor form the matching network.

This is a high duty cycle application transmitter on for a total of 15 minutes or more per day. A dime cell powered design at 433mhz would require much too much power and has poor human body penetration characteristics. Other frequencies (from 7mhz through 150mhz) are now being authorized for use in through body communication to pacemakers and synthetic organs. We may switch to a somewhate higher frequency for a next generation design but for now must make a compatible 2mhz PCM transmitter to provide ongoing support for the existing systems.

Anyway, if you can help provide antenna and matching network design software or antenna consulting for this project please contact me. We probably have thought about most other options and weighed the issues which include new FDA and FCC certification and regulation issues.

Thanks for your consideration,

Shannon Bailey

Perhaps you may want to consider an IR emitter? it can be made small enough, good on power, will have the range you need......just a thought. select a high enough "carrier" freq and it wont be bothered by lighting or other apps nearby.

198. new 2m repeater on space station

Newsgroup: rec.ham-radio
Date: 2004-09-13 10:17:58 UTC

new 2m repeater on space station
a new 2m repeater is now operating on the
international space station 24 x 7
the uplink is on uhf 437.800 and the downlink is on vhf 145.800
no tone burst or ctcss is required
the radio is a kenwood tmd700 operating in remote crossband mode
it just retransmits on vhf what it hears on uhf
so if you are getting through you can hear yourself
on the downlink

anyone can work it using a co-linear

to see where the space station is 'live' check

http://science.nasa.gov/temp/StationLoc.html

for 3 days in advance predictions download the pcsat decoder program

http://www.ui-view.com/uiview32/pcdec242.msi

when the iss repeater is being worked the audio may be streamed in the
amsat
conference server on echolink so anyone anywhere in the world can
listen in

Source record: 67

Again,

I am looking for an engineer capable of designing a 2mhz 3/4" square PCB antenna. It can be very inefficient but still must work as well as possible within the constraints I've specified. Referals would be great too.

Knowledgable HAMS who can breadboard the design and have sufficient test gear to verify it are also welcome to contact me. I will provide a small signal generator circuit for testing.

Thanks,

Shannon

200. is there any thing called voip that i can use with my 2 way radio ??

hi !
is there any thing called viop that can be used for my 2 way
radio ?? i just heared of it from a friend that ... i can use it ..for
my 2 way ? is there any thing like this ??

I'm not sure what you are asking about. Try

www.echolink.org

and see if that would be a good starting point. I assume meant VOIP
like your subject said, and not VIOP as you message body said.

There are several programs that will allow you to access your radio
remotely, if that is what you mean. Some use NetMeeting to do it, and
they seem to work well.

Take care, and if you want to contact me personally, read the stuff at
the end of this message.

73,
Dave

Hi! I'd like to install a base antenna in my house. What kind of antenna would yo recomend me? I'd like to build one for my base station, but i cannot decide what's the best.

Thanks in advance, and excuse for my english.

What kind of activity are you planning from your base station? Will it be
just working repeaters or do you plan to do some 2m SSB and CW?

Dee D. Flint, N8UZE

I use the VX150 (2m only) and love it. I have not tried the FT60R, but if it
is half as reliable it should be a good unit.

I'm in a similar boat, having passed my BASIC (Canada) exam. I need
something very rugged because a) I will take this everywhere,
including camping trips and b) I tend to drop things!!!

I've done a lot of reading on the eHAM site (posted elsewhere) and did
a lot of listening on my scanner to hams in Toronto. I had the
occastion a few days ago to listen in to a conversation between two
hams with the VX-7R, the model I'm most interested in. I was worried
about the sound quality postings but they sounded great. Then I heard
one of them mention he was on an external mic. Just then another ham
buddy of mine came into the conversation. I called him on his cell and
he relayed my request to have the two vx-7r's switch to their internal
mics. They did and they both sounded GREAT!

I've basically decided to go ahead with the vx-7r, now that I've had
the chance to hear them in action!

Rob
